Direct Submission

AL Submitted (02-Aug-1999) Drosophila Genome Center, Lawrence Berkeley Laboratory, MS 64-121, Berkeley, CA 94720, USA

On Feb 11, 2000 this Sequence version replaced gi:5670417.

For further information about this sequence, including its location and relationship to other sequences, please visit our sequence archive Web site (http://www.fruitfly.org/sequence/) or send email to bdgp@fruitfly.berkeley.edu. All contigs in this submission meet the following cutoffs: length >= 200 bases.

* NOTE: This is a 'working draft' sequence record is consists of 92 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as true order of N. but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as as as as as as a true available and the accession number will
         AC008323 123296 bp DNA HTG 10-FEB-2000 Drosophila melanogaster chromosome 2 clone BACR03G07 (D850) RPCI-98 03.6.7 map 24D-24D strain y; cn bw sp, *** SEQUENCING IN PROGRESS

AL Submission

Submitted (28-APR-1999) Drosophila Genome Center, Lawrence Berkeley
Laboratory, MS 64-121, Berkeley, CA 94720, USA

On Aug 2, 1999 this sequence version replaced gi:5649319.

For further information about this sequence, including its location
and relationship to other sequences, please visit our sequence
archive Web site (http://www.fruitfly.org/sequence/) or send email
to bdgp@fruitfly.berkeley.edu. All contigs in this submission meet
the following cutoffs: length >= 200 bases.

* NOTE: This is a 'working draft' sequence. It currently
consists of 83 contigs. The true order of the pieces

* is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as

* Tuns of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       misc_feature
                                                                                                                                                                                                                                                                                                                                       misc_feature
                                                                                                                                                                                                                                                                                                                                                                                   together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWHSSPROT; Tr., TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 Mapping Group. Further information can be found at
                                                                                                                                                                                         Direct Submission
Submitted (08-DEC-1999) Sanger Centre, Hinxton, Cambridgeshire,
CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk
On Dec 13, 1999 this sequence version replaced gi:1903194.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Roswell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequencing Vector: M13; L08821
Chemistry: Dye-primer Bodipy: 15% of reads
Chemistry: Dye-terminator Big Dye: 43% of reads
Assembly Program: Phrap; version 0,980611
Consensus quality: 77406 bases at least 040
consensus quality: 108419 bases at least 020
Estimated insert size: 120294; sum-of-contigs estimation
Quality coverage: 1.8x in 020 bases; sum-of-contigs estimation

It currently consists of 70 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2: contig of 782 bp in length

It currently consists of 74 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            f unknown length

The reaper (rpr) and head involution defective (hid) genes, mapping to position 75C1,2 of D. melanogaster chromosome 3, exhibit expression patterns related to the pattern of cell death during Drosophila embryogenesis. Cell death genes, or antisense sequences, can be used to reduce or abolish apoptosis, e.g. in transgenic animals. An hid cDNA sequence is given in 060590, and the deduced sequence of the encoded HID protein in R55791.
Sequence 3900 BP; 1288 A; 876 C; 736 G; 1000 T;

The reaper (rpr) and head involution defective (hid) genes, mapping to position 75C1.2 of D. melanogaster chromosome 3: exhibit expression patterns related to the pattern of cell death during Drosophila embryogenesis. Cell death genes, or antisense sequences, can be used to reduce or abolish apoptosis, e.g. in transgenic animals. The genemic sequence of hid is given as 4 contiguous sequences in Q66946-49, which together encode HID protein.

                                                                                                                                                       which is part of a non-naturally occurring chromosome. Nucleic acids comprising the CYPBA4 polymorphic sequences can be used to screen patients for altered metabolism for CYPBA4 substrates, potential drug-drug interactions, and adverse/side effects as well as diseases that result from environmental or occupational exposure to toxins. They can also be used to establish animal, cell culture and in vitro cell-free models for drug metabolism. Polymorphic CYPBA4 gene sequences can be used for expression studies to determine the effect of promoter and/or intron sequence variations on maRNA expression and stability. The polymorphisms are also used as single nucleotide polymorphisms to detect genetic linkage to phenotypic variation in activity and expression of CYPBA4. The nucleic acids can also be used to generate genetically modified non-human similars or site specific gene modifications in cell lines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       thaliana. The nucleotide sequence encoding CLVI, including its corresponding antisense sequences, are used to alter meristem phenotypes, in particular the enlargement of apical shoot or floral meristems, to provide an increased yield of leaves, flowers, fruits and seeds in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes clavatal (CLV1) isolated from Arabidopsis

This sequence represents a polynucleotide of the invention. It was isolated from Helicobacter pylori and encodes a H.pylori GHPO protein. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroducdenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases. G. gastric and duodenal ulcers. They can also be used for the production and diagnosis.

While State of the Parameter of alpha-1,4-glucan lyase from fungus - and its recombinant prodn from isolated DNA.

For Isolation of alpha-1,4-glucan lyase from fungus - and its recombinant prodn from isolated DNA.

Claim 9; Pages 30-32; 51pp; English.

CC The enzyme alpha-1,4-glucan lyase(GL)was purified from Morchella costata (MC) by affinity chromoatography on beta-cyclodextrin costata (MC) by affinity chromoatography on beta-cyclodextrin costata (MC) in exchange on Mono Q HR 5/5 (FTM) and gel costatation on Sepharose (RTM) 12 columns. The purified enzyme an Isolectric point of pl 5.4. The optimum pH range for the fungal cost in a Isolectric point of pl 5.4. The optimum pH range for the fungal lyase catalysed reaction was between pH 5 and pH 7. The purified cost lyase catalysed reaction was between pH 5 and pH 7. The purified cost lyase catalysed reaction was between pH 5 and pH 7. The purified cost lyase catalysed reaction was between pH 5 and pH 7. The purified cost maltotriose (56%) and maltose (2%). The lyase was digestesd with condoproteinase Arg-C from Clostridium histolyticum or endoproteinase CC Lys-C from Lysobacter enzymogenes. The resulting peptides were componences of three overlapping cC Lyptic peptides from GL (se R72713) were used to generate mixed collyos which could be used as PCR primers for the amplification of CC DNA isolated from Morchella. The primers are 089703-4 and 090305-6.

                                                                                                                                                          Morchella costata used in claimed processes of the invention. A morchella costata used in claimed processes of the invention. A claimed process of preparing a medium that contains an antioxidant and at least one other component involves preparing antioxidant from a glucan, in situ, by use of recombinant DNA techniques. Also claimed are: (1) use of anhydrofructose as an antioxidant for a medium, where the anhydrofructose is prepared in situ in the medium; (2) use of anhydrofructose for imparting or improving stress tolerance in a plant, where the anhydrofructose is prepared in situ in the plant; (3) use of glycan lyase for imparting or improving: (i) stress tolerance in plant, or (ii) transformation of grape, where the glucan lyase is prepared in situ; (4) use of a menso of inparting or improving stress tolerance in a plant, where the NS is expressed in situ in the plant, and (5) use of a NS coding for a glucan lyase for imparting or improving stress tolerance in a plant, where the NS is expressed in situ in the glucan lyase for imparting or improving the transformation of a glucan lyase for imparting or improving the transformation of a glucan lyase for imparting or improving the transformation of a grape, where the NS is expressed in situ in the grape. The antioxidant containing medium can be used as foodstuff or in the preparation of foodstuffs such as beverages, in particularly perparent or preparation of foodstuffs such as sheverages, in particularly sequence (3201 BP; 903 A; 752 C; 770 G; 776 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   968 GTATCCGCACTGATACCGTAACAATCGATACCACCATACCTGGTTCCCAGCTTGATGTAG 909°
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        243 ccgggcgtaaaccggtaacgcatcacctgacggaagaagaatgcaaaaagagtttcattaca 302

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          with pure alpha-1,4-glucan lyase, martic. useful as antioxidant and sweetener for foods and beverages
Claim 12, Page 101c-102b; 166pp; English.
An alpha-1,4-glucan lyase enzyme (preferably pullanase or isoamylase)
is used in a new method for the production of 1,5-D-anhydrofructose.
The enzyme is isolated from either a fungus (M.costata or M.vulgaris)
or from fungally infected algae (G.lemaneiformis) or algae alone.
1,5-D-anhydrofructose is useful as an antioxidant and sweetener for foodstuffs and beverages. It is also useful as an intermediate for the antibiotic microthecin, an oxygen scavenger during polymerisation reactions and as a reducing agent in the synthesis of blodegradable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              243 ccgggcgtaaaccggtaacgcatcacctgacggaagaaatgcaaaaagagtttcattaca 302

animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, hemanatopoiseis regulating activity, tissue growth activity, activity, activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Trans-aldolase gene - providing high level expression of trans-aldolase gene - providing high level expression of the trans-aldolase gene - providing high level expression of the therologous protein, esp. human serum albumin, in yeast, not be the subject to glucose repression.

Claim 3; Page 16; 30pp; French.

CLA: Standard ragment (05701) was isolated from a library of two lacts 2359/152 genome fragments fused to B. Coli lacz. The comprises a trong promoter sequence suitable for high level expression of recombinant proteins in Kluyveromyces or other yeast hosts. The promoter is not subject to glucose repression content yeast hosts. The promoter is not subject to glucose repression so can be used in conventional culture media. Restriction enzyment was cloned in vector pCRII to give pYG176. The KlTAL1 promoter can be removed from this plasmid by Mulr-HindIII digestion and the removed from this plasmid by Mulr-HindIII digestion and the resulting "portable promoter" is then used in the construction of vectors for expression of heterologous proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1160 ctgaacaaaaacctgttagttagtaggaataactaaccggtgaacattacccggatgta 1219

A 1.3kb cDNA fragment (057701) was isolated from a library of K.lactis 2359/152 genome fragments fused to E.coli lacz. The K.lactis 2359/152 genome fragments fused to E.coli lacz. The isolated clone comprises a strong promoter sequence suitable for high level expression of recombinant proteins in Kluyveromyces or other yeast hosts. The promoter is not subject to glucose repression so can be used in conventional culture media. See also 057702. Sequence 1349 BP; 397 A; 271 C; 202 G; 479 T;

Insolated nucleic acid encoding hepatocyte nuclear factor 1-alpha and 1-beta - useful for detecting susceptibility for non-insulin dependent diabetes, especially maturity-onset diabetes of the young claim 95; Fig 26A-M; 363pp; English.

This is a partial nucleotide sequence of the gene (TCF2) encoding human hepatocyte nuclear factor 1 beta (HNF-1 beta, see W71580), a homeodomain-containing transcription factor. Mutations in this gene are indicative of a propensity to diabetes mellitus. The invention concerns the identification of genes responsible for diagnostics and therapeutics. It demonstrates that the MODY3 locus

It is used for treating tumours, particularly oestrogen-sensitive epithelial tumours. The protein can also be used to produce antibodies which in turn can be used in diagnostic applications.

Sequence 618 BP; 107 A; 232 C; 189 G; 90 T;
is the HNF-1 alpha gene (see V52625), the MODV4 locus is the HNF-1 beta gene (see also V52730) and the MODX1 locus is the HNF-4 alpha dene (see V52687). Analysis of mutations in these HNF genes can be diagnostic for diabetes. The invention also contemplates methods of screening for modulators of HNF function utilising HNF nucleic acids or polypeptides, the modulators being useful for treating diabetes by modulating HNF function in an animal.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutovyo Osogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; no bw sp. the same strain used for the BDGP's and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://www.inch.id.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AA020733 268 bp mRNA EST 30-JAN-1997
